

A Great Casebook for Students, Professors and Professionals on an Often Complex Subject!

MERGERS & ACQUISITIONS CASES AND PROBLEMS

By Wendy B. Davis
Associate Professor of Law
Albany Law School

This gives a **comprehensive foundation in the many legal issues involved in complex corporate combinations**, including mergers, asset acquisitions, stock acquisitions and the corporate attempts to avoid these transactions, including tender offers, poison pills, shark repellent and other actions. Readers will gain knowledge of the issues involved by reading cases decided in the past few years, and reviewing questions and problems related to the cases. Relevant statutes, regulations and forms of agreements will be included for drafting analysis.

“Mergers and acquisitions of corporations are intensely regulated transactions in the United States. No single agency has sole authority and no single set of rules applies; instead, practitioners in this field must review state laws relating to incorporation, labor, and contract, as well as federal securities regulations, antitrust, tax, environmental, and other laws, in addition to accounting standards. Each of these topics will be addressed in this case book.”

— Introduction

Davis received her Juris Doctor from Boston College Law School and is currently an Associate Professor at Albany Law School.
